Education

University of Minnesota Twin Cities
B.S. Computer Science, GPA: 3.96/4.0
ICPC World Finalist 2026 | UMN ICPC Coach

Expected Dec 2026

Experience

- VecML Inc. (AI startup)** *Bellevue, WA*
- Software Engineer Intern — LLM Agent Infrastructure & Evaluation** *May 2026 – Jul 2026*
- Built and deployed a **multi-agent orchestration runtime** for long-horizon LLM workflows, representing plans as executable code and scheduling dependency DAGs across parallel subagents; delivered up to **3.8× faster execution** on internal benchmarks.
 - Integrated **RAG-backed long-term memory**, tool routing, generated-code execution, and verifier-based result checking; built an internal **evaluation and observability harness** with run tracing, state inspection, replay, and failure analysis to improve task success and benchmark tool-call reliability and latency.
- Software Engineer Intern — AI Data Analysis Platform** *Jun 2025 – Aug 2025*
- Built an **LLM-powered data analysis agent** that generated and executed code for exploratory data analysis, visualization, and machine learning workflows.
 - Shipped a **notebook-native Flask/React analytics platform** integrating AutoML with editable Jupyter notebooks; enabled internal and external users to inspect generated code, modify analyses, and reproduce results.

Honors & Awards

- ICPC World Finalist 2026** *Mar 2026*
Ranked 9th in North America (ICPC NAC); first UMN team to qualify in 10 years.
- Gold Medal – ICPC North Central NA Regional Contest** *Nov 2025 / Nov 2024*
- USACO Platinum – Ranked Global Top 30** *Dec 2021*
- Bronze Medal – National Olympiad in Informatics (NOI)** *Jul 2021*
- Silver Medal – National Olympiad in Informatics Winter Camp** *Jan 2021*
- First Prize (Six Times) – NOIP / CSP**

Research & Publications

- Recursive Synthesis for Long-Horizon Terminal Tasks** *Aug 2026 | ICLR'27 Submission*
Co-author | Tencent Hunyuan LLM Frontier AI Lab *Data Synthesis, Agent Training, Docker*
- Co-developed a recursive verified synthesis pipeline that generated **37,484 executable terminal tasks** over 15 rounds at approximately **\$0.05/task**; training on synthesized trajectories improved Qwen3.5 models by up to **10 points** across three terminal-agent benchmarks.
- Long-Horizon-Terminal-Bench (LHTB)** [GitHub] *Jul 2026 | ICLR'27 Submission*
Co-author | Tencent Hunyuan LLM Frontier AI Lab *Python, Harbor, Docker, Terminus-2*
- Co-developed **46 long-horizon tasks** across nine domains with Dockerized environments, reference solutions, and dense hidden verifiers; extended the Python/asyncio harness for verifier-guided continuation and evaluated **15 frontier models**.

Projects

- Terminal AI Coding Assistant** *MCP, ReAct, Multi-Agent*
- Architected a five-layer agent runtime with multi-provider LLMs, **100+ lazy-loaded MCP tools**, persistent memory, and permission-aware execution, reducing tool-schema overhead by **85%**.
 - Built a two-stage context compression pipeline sustaining **8+ hour** coding sessions; automated SWE-bench-Live and context-retention evaluations improved retained information from **17% to 100%**.
 - Implemented file-isolated multi-agent execution, reducing multi-file refactoring time by approximately **60%**; risk-based permission gating cut approval prompts from 30 to fewer than 5 per session.

Skills

Languages: C++, Python, Java, TypeScript, SQL, C#, JavaScript, Go, C
AI/ML & Frameworks: RAG, PyTorch, scikit-learn, React, Flask, FastAPI, pandas, NumPy
Tools & Platforms: Git, Docker, Linux, AWS, Redis, MySQL, Jupyter, MCP
